

(a) Inter-layer feedback (top-down $t - 1$ + skip t)

(b) Inter-thread lateral feedback (same step t)

applied at every layer l , after the readouts,
before feeding layer $l + 1$ (and the head)

--- top-down $t - 1$ (deep $\rightarrow$ shallow) skip t (surface $\rightarrow$ deep) -.- lateral same- t (thread $\rightarrow$ thread)
